

Network Automation in Open-Vendor Network Environments | Keynote from racksnet® at TECHWEEK2019

Eschborn, 11.11.2019

From 13 to 14 November 2019 leading representatives of the IT sector will meet in Frankfurt am Main at TECHWEEK2019 | Cloud Expo Europe.

In Germany, the TECHWEEK trade fair is regarded as the most important event for innovative business applications in the cloud. World market leaders, IT visionaries and users will be discussing opportunities and paths through digital transformation. The areas of network infrastructure and automation play an important role here.

The interest in TECHWEEK2019 is huge. A total of around 7000 visitors from Germany and abroad are expected on both days of the fair.

The Eschborn-based tech-company racksnet GmbH will also be at TECHWEEK2019 and will present itself there as an exhibitor and sponsor. Already on the opening day the CTO of racksnet®, Nauman A. Basit, will give a keynote. His topic: Network Automation in Open-Vendor Network Environments. During his 30-minute talk, he will talk about the latest trends and developments in network automation, focusing on vendor independence and ease of implementation. Manufacturer-independent solutions are particularly important because they involve more and more companies and providers and are now regarded as an important key to the successful transformation of the network industry.

Save the date!

13.11.2019, 3:20 to 3:50 p.m. at NextGen Infrastructure Theatre | Keynote from Nauman A. Basit, CTO racksnet GmbH: “Network Automation in open-vendor environments – How to decomplex your daily network operations”.

With the automation solution from racksnet®, IT networks can be analyzed, planned and automated (including IoT networks) independently of hardware manufacturers such as Cisco, HPE, Huawei or Cumulus (Linux). This creates new possibilities, not only for other interesting manufacturers such as Dell EMC, whose network devices are now being used for the first time at TECHWEEK2019 with a racksnet® solution, but also for the increasingly attractive whitebox solutions.

Another unique feature is that no scripting (CLI) is required for the configuration of complex infrastructures with the racksnet® software. All entries are made via a graphical user interface (GUI), drag & drop and numerous templates. Playbooks can also be easily and quickly integrated into the cloud based application of racksnet®.

The racksnet GmbH was founded in 2017 by former Cisco and HPE managers with the aim of managing and automate IT networks without the need for proprietary programming languages or scripting. In the meantime, the SaaS-company located in the Tech-Cluster Eschborn (Hesse) offers its customers a unique, easy-to-use, cloud-based, cross-manufacturer automation software.
