

racksnet® joined Open Networking Foundation (ONF)

Bad Soden, 12.08.2020

Since the beginning of August, the German-based software manufacturer for Network Automation is a member of the Open Networking Foundation.

The ONF was founded 2011 in menlo park (California) by global players such as Google, AT&T and Deutsche Telekom. The consortium is driving forward the establishment of open standards for network infrastructures. ONF is thus sending a clear signal against the proprietary systems that have long dominated conventional network equipment suppliers.

Today, the Open Networking Foundation has over 100 international cooperation partners and members - such as Cisco Systems, Intel, DELL EMC, NTT Group, China Mobile, Verizon.

By joining ONF, racksnet® is now internationally taking the peak of a disruptive development in the networking business. At the end of this movement new technologies and business models will emerge.

The racksnet® Network Automation Software orchestrates the interaction between of Open Networking Hardware (switches, routers, access points and WLAN controllers) and operating systems like Pluribus OS, Sonic OS, Cumulus OS or Pica 8 OS etc.

Thus, racksnet® not only ensures a smooth automation and network management process, but also provides companies and organizations with a number of significant advantages such as Vendor independence, Cost reduction in the acquisition and operation of network infrastructures (now also enables the use of Brite-Box solutions), more flexibility and increased agility for IT teams, fast and secure scalability of network resources as well as optimal adaptability of the network components used to hanging or increasing requirements within companies and organizations.

racksnet GmbH is a German software company for the areas of Software-Defined-Networking, Managed Services and Open Networking Solutions.

The racksnet GmbH offers its customers automation and management solutions to simplify complex network infrastructures. Thanks to the manufacturer-independent and intuitively operable, uniform Drag & Drop GUI, users no longer have to resort to manufacturer-specific scripting when automating networks, which increases security and flexibility of networks considerably.

The company has its headquarters in Bad Soden / Taunus.
